## Feature Enhancements

### Minor Enhancement to Student GUI

The selection list in the Student Logon dialog box has been re-titled to make it more meaningful; "Identify Student by:" has become "Identify Computer by:" (**Tools > Options > Student Logon**).

Enhancement US3357

## Issue Resolutions

### Disruptions in the display of thumbnails on the teacher computer (including flickering thumbnails)

When a student logged on to computers before the teacher had started a class, there was a short delay before that student computer would appear on the teacher computer, sometimes appearing as if the student was not connected. The defect was also characterised by the flickering of thumbnails as seen by the teacher.

Having the student log out and back in again did not resolve the issue and nor did re-announcing the class. Sometimes the teacher module would freeze, occasionally with a "Not responding" error message and at times restarting the teacher module resolved the issue.

Failure to clear the Attention screen from student screens was a related issue: the student's screen, keyboard and mouse would remain locked. For some students it would take up to a minute before screen, keyboard and mouse were released, and the teacher application could freeze.

These issues have now been resolved.

Defects DE6783 & DE7316 & DE5980

### Student names were not refreshed between logins

After a student had logged off and a different student logged on to the student module the student names reported in a class were not always refreshed. This issue has now been resolved.

Defect DE7027

### Wrong MAC address recorded in student information

The MAC address used to identify the network card in a student computer was incorrectly saved in the student information dialogue: it was not always the MAC address of the physical network interface card (NIC) which was saved. This prevented the Wake-on-LAN feature from working on affected computers. This issue has now been resolved.

Defect DE7352

## Known Issues

There are no additional known issues to report at this time.
