

NETOP® Vision™ PRO Classroom Management Software

Want the best? Netop Vision Pro is the powerful new classroom management software that combines ease of use with enhanced features for best-in-class performance. Vision Pro starts with the intuitive user interface and robust feature set that have made Vision the most popular classroom management software, and then adds more. With unsurpassed screen-sharing speed and the ultimate in web control, Vision Pro offers teachers the very best in classroom management.

Present lessons dynamically

Demonstrate directly on student computers with high-speed screen sharing technology that makes it easy to teach, share and stream software programs that require hardware acceleration. Increase comprehension and improve retention of key concepts.

Ultimate web control

Guide students to appropriate websites, filter out the rest. Vision Pro gives teachers instant control over student Internet access. Teachers can select approved websites, create a list of blocked websites or disable Internet access entirely with a single click.

Guide student learning

Use chat to help any student through a tough problem right from the teacher's desk or take remote control of the student's computer to demonstrate a solution.

Focus student attention

Launch files, applications and web sites on student computers and block out distractions. Vision Pro helps teachers make the most of valuable class time and keep the whole class learning together.

Supervise student computer use

Monitor the whole classroom from the teacher's computer. Keep an eye on web browsing, identify students who need extra help and improve classroom time on task.

Remotely log on student computers

Save time by using a common login name and password to get student computers up and running before class starts. Need to install updates? Allow IT staff to remotely log on with an administrative password and perform updates.

Unique push-button controls

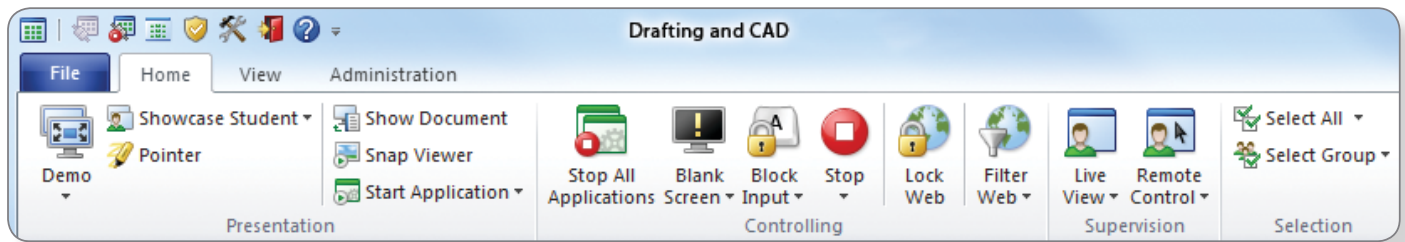

Vision is available with the Netop TeachPad, the one-of-a-kind tool that provides push-button control over classroom computers.

BENEFITS

- Engages students
- Reduces distractions
- Ensures appropriate use of school computers
- Keeps students on task
- Makes teaching more effective
- Boosts classroom productivity
- Inspires student learning
- Increases retention rates
- Proven to improve student performance

"We found that because the students are distracted less, receive more attention from the teachers and remain on task longer, they're finishing their assignments faster and with better results."

PETE BACCILE - HORNELL CITY SCHOOL DISTRICT

Demo

Give every student a front-row seat by presenting lessons directly on student computer screens

High-speed Screen Sharing

Share videos and demonstrate graphics-intensive applications like AutoCAD

Showcase Student:

Build confidence when you let students share their work on every computer screen in class

Pointer

Annotate lessons in any application with more than 20 shapes and highlighters

Start Application

Save time by opening the correct application on every student computer simultaneously

Stop All Applications

Block student access to applications with one click while you're teaching or giving directions

Remote Log On

Sign on to all student computers with a common user name and password

Blank Screen

Focus student attention at the beginning of class or while giving directions by blanking computer screens

Block Input

Remove student distractions by locking keyboards and mice during instruction time

Stop

Stop the currently active Vision controls on classroom computers, for selected students or the whole class

Lock Web

Turn student web browsing on or off for one student or the whole class from the teacher's computer

Filter Web

Easily create lists of approved or blocked sites right from your browser to guide student Internet use

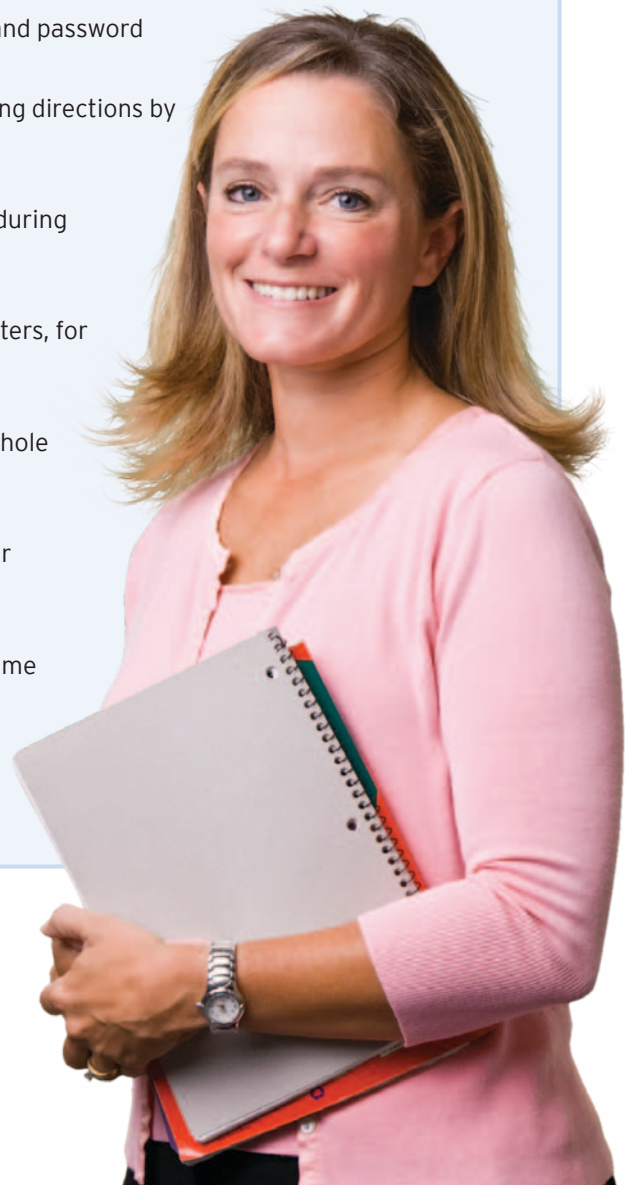

Live View

See any student screen in high-quality, larger screen in real time in a new window

Remote Control

Work through a problem with a student or take control of a student's computer to demonstrate a solution

"Now I can really focus on the grade level expectations that the state requires. It's much easier to meet the technology goals and standards for our school curriculum by ensuring that each student is both exposed to and proficient in computer skills."

A. JARET TOMLINSON - ORRICK HIGH SCHOOL

1-High-Speed Screen Sharing:

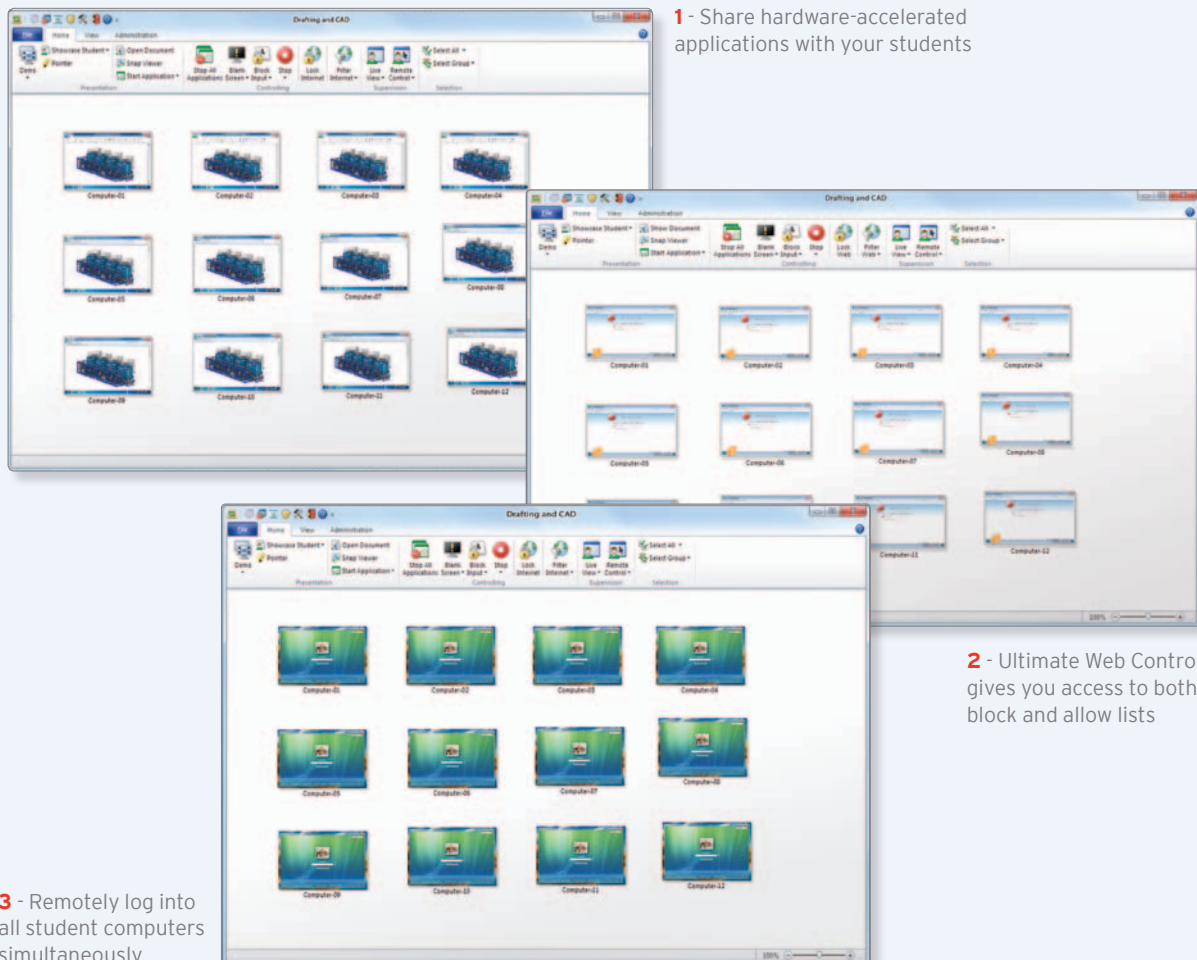

- Vision Pro's high-speed screen sharing lets educators share graphics-intensive applications in real time.
- Provide dynamic demonstrations with the ability to share any application with students - even hardware-accelerated applications.

2-Ultimate Web Control

- Vision Pro's unique ability to combine resource lists of approved sites with block lists of distracting sites truly provides Ultimate Web Control.
- Add sites on the fly to either block lists or resource lists.

3-Remote Login

- In ICT suites or classrooms where students use a common name and password, educators can now log into all computers remotely.

1 - Share hardware-accelerated applications with your students

2 - Ultimate Web Control gives you access to both block and allow lists

3 - Remotely log into all student computers simultaneously

"Students understand complex, computer-related instruction much better because it's right in front of them on their own screens. They see it, then they do it. Their retention is better, so that amount of time struggling with the program is reduced, and they can get their work done."

Options to Enhance Your Vision Classroom

Netop TeachPad - The Netop TeachPad is the one-of-a-kind tool that offers teachers push-button control over the most essential classroom management functions. Demonstrate, blank screens, supervise computers and turn web surfing on or off with one touch. This unique hardware device makes it easy for any educator to teach effectively with technology, regardless of their technical ability. Effortlessly engage the whole class and eliminate distractions instantly with the Netop TeachPad.

Netop Vision@Hand - Vision@Hand is the free software extension to Vision Pro that brings classroom management to your PDA, Smartphone or other wireless device. Designed for teachers who want to maintain control over student computers while moving freely around the room, this innovative addition is unique to Vision Pro. Get your class's attention, demonstrate student work and control web browsing from anywhere in your classroom with Vision@Hand.

EXTEND YOUR REACH

Vision Pro has the most comprehensive feature set to help you reach more students in almost any learning environment. Vision Pro supports multiple classrooms and communicates easily across local and wide area networks, as well as giving educators a wide range of connection options to support mobile computing.

"Finally I am able to supervise my entire class while helping individual students at the same time. Vision is really great!"

BARBARA WEGER - SCHOOL OF ECONOMICS AND BUSINESS
BERN, SWITZERLAND
