It’s funny, but we don’t always think about classroom management software as something we can use to improve and make our lesson planning easier; focusing instead on how it helps us keep an eye on students, and block access to websites. Netop Vision for Chromebooks is a platform with a really clear interface that enables us to go beyond the basics; saving us time and enabling us to achieve more through intelligent integration.

Netop Vision for Chromebooks works with Google for Education (GAFE) so schools can use their existing Google Domain. It’s simple to install and navigate, so you can be up and running without any obstacles or hassles; its features actively drive student engagement and improve classroom efficiency; and it comes with screen blocking, website blocking and other top tools so that learners interact purposely and productively with your lesson.

Here’s the really cool thing, though: with Netop Vision, you can see every student screen in real time from your Chrome device (there is also a teacher app for Windows) as thumbnails, which means you can monitor an entire class in a glance. It even shows what’s outside the browser. You can zoom into individual screens,
take screenshots, and listen to the audio on a student’s device.

Leaving students to their own devices is important, but sometimes we need to intervene. Want to pause all screens in the class at once? No problem. Netop Vision is brilliant for taking control and getting all eyes on you; all you have to do is push a button and everyone gets a direct message saying “Fascinating things are happening around you right now. Make sure you don’t miss anything.”

One key feature is a fabulous screen-sharing tool, which means you can share your resources and presentations across students’ devices with ease. There’s no time-wasting, because you can push URLs directly to their screens and open a website on every Chromebook at once.

Checking students’ understanding is discreet and easy with Netop Vision, as the software enables you to send private messages to learners, allowing you to provide additional support with no fuss. Netop Vision is a clean, simple and powerful platform with brilliant and innovative features, giving teachers control of Chromebooks on an individual and classroom level.
