

NETOP™ MyVision BASIC

Classroom Management Software

Designed for teachers who need basic, entry-level classroom management, MyVision is the affordable solution that works on Macs and PCs. My Vision gives teachers essential tools for teaching with computers. Supervise student computers, share on-screen demonstrations, instantly get the attention of the entire class and control Internet access. Available via low-cost online subscriptions, MyVision Basic is ideal for teachers who have never been able to afford standard classroom management software.

Supervise student computer use

Monitor the whole classroom from the teacher's computer. See every student computer screen, monitor Web browsing and improve classroom time on task.

Engage the entire class

Demonstrate directly on student computers with screen-sharing technology that engages student interest, increases comprehension and improves retention.

Get students' attention

Instantly blank student screens and lock keyboards and mice to focus attention on the teacher for important instruction or discussions. Eliminate distractions with one click.

Control classroom Internet access

Turn Internet access on or off for the entire class with just one click. MyVision lets teachers determine when Web browsing is appropriate for their students, and instantly block Web access.

Chat with students

Send a message to the whole class, or chat with individual students or a group to answer questions, offer help and provide one-to-one assistance.

Works on Macs and PCs

Now schools with Mac computers and PCs have access to simple, easy-to-use classroom management tools that are appropriate for any teacher.

Affordable for any school

Low-cost subscriptions to MyVision Basic make essential tools for teaching available to teachers with budget restrictions. Free version also available.

BENEFITS

- Control web browsing
- Monitor student computer use
- Help students individually
- Eliminate distractions
- Improve classroom time on task
- Increase comprehension
- Improve retention
- Identify students who need help
- Works on Macs and PCs
- Affordable for any school

FEATURES

Supervise student computing work

Monitor the whole classroom from the teacher's computer. See every student computer screen, monitor Web-browsing, identify students who need extra help and improve classroom time on task.

Engage students with demonstrations

Demonstrate directly on student computers with screen-sharing technology that engages student attention, increases comprehension and improves retention of key concepts.

Get the attention of your class instantly

Blank student screens and lock keyboards and mice to focus attention on the teacher for important instruction or discussions.

Chat with students

Use MyVision to chat individual students, a group or the whole class. Offer assistance, facilitate group discussions or send a message to the whole class.

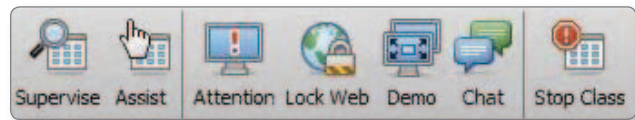

Control student Internet access

Turn Internet access on or off for the entire class with just one click. MyVision lets teachers determine when Web browsing is appropriate for their students, and instantly block Web access.

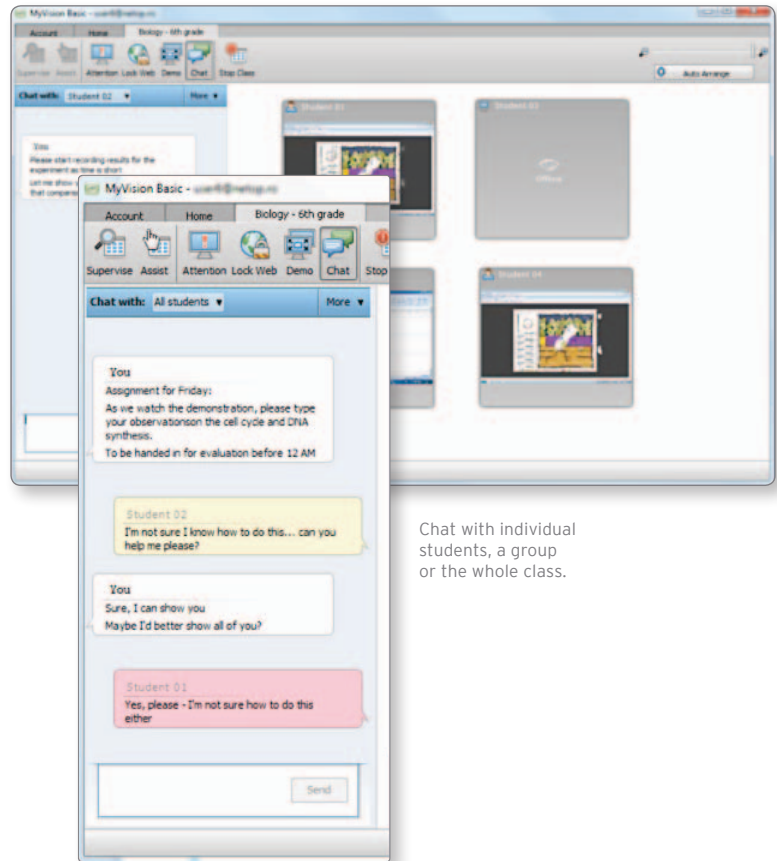

Manage multiple classrooms

Netop MyVision makes it easy to download and install the student module from the teacher's computer (provided that you have the appropriate permission levels for school computers.) Once student modules are installed it is easy to set up and manage one or more classrooms.

MyVision Basic has a simple, easy-to-use toolbar.

MyVision is simple to set up for multiple classrooms.

Chat with individual students, a group or the whole class.
